

Earn your PhD in nutrition with UNC-Chapel Hill's Global Food Research Program

The Global Food Research Program (GFRP) trains the next generation of leaders in nutrition, food systems, and food policy. Our students pursue a PhD in nutrition with a minor in epidemiology from the University of North Carolina at Chapel Hill's Gillings School of Global Public Health, where they have opportunities to:

Use population-level and experimental data to inform and evaluate food policies to reduce local, national and global health disparities

Work to promote healthy and sustainable diets with a focus on low socioeconomic and vulnerable subgroups

Collaborate with interdisciplinary faculty and our research partners in the US and nine countries

Experience true teamwork in a supportive environment that prioritizes inclusion, curiosity, kindness and growth.

We prioritize equity in nutrition and human health, and are actively recruiting students who will contribute diverse perspectives to our team.

Join us for an interactive webinar on Thursday, November 7, 2024. [Register here](#) (or scan QR code):
